Dear Intended Client ,

Thank you for your interest in ordering a Custom Hair Replacement System from Cindycut, International Inc.

Enclosed is the material you requested. Because our Systems are Custom, each one is unique in its design and characteristics. They cannot be portrayed like Stock hairpieces in a Catalog. We sell or rent charts for choosing Densities, Base Materials & Designs, Grey Percentages, and Wave/Curl patterns available for our systems. Our price is low, but not our Quality. Because we are a direct factory distributor, and we don't mark up the product as much as other companies do, this means a terrific value for you.

We take pride in offering you the finest quality custom hair systems. In order to keep our costs down and give you the best price possible, we believe in concentrating our efforts more on personalized service and not high cost sales techniques.

Our Factory's in Korea and China are very dedicated to serving our needs and yours. We can rush your orders at no extra charge. We send written confirmation to you as soon as we process your order for the factory. Production time is 25 days once the factory receives the order. Add 10-14 days for all the shipping involved. So you receive your orders in approximately 8-10 weeks.

We are confident you will be pleased with the quality of our product and encourage you to refer us to your friends. We love helping to make your dream come true of having great hair, and look forward to doing business with you soon!

Sincerely,

Cindy Lee,
CEO

CindyCut

Custom Ordering Instruction Guide

Size: Size is determined through the use of a tape template, plaster, fiberglass or foam mold. Size can be specified in inches, however this neglects to show contour and recession needed on unit. (Contour is the curvature of the head. Recession is the shape of the front hairline. Both are necessary to provide a proper custom fit and natural look to the finished piece. See our separate sheet for instructions on making a Template or our Educational Training Tape to help. You may also send us an old system that fits properly to use as a template.

Base Materials:

The base material ring shows the types of Mesh available for interior of unit, fronts, and Tape/Bonding areas. Use "Draw Base Design" diagram on the order form to show specifically of where you want base materials, as well as tape tab size.

Types of Hair:

Synthetic: Grey hair is synthetic.

The factory uses a blend of Kanekalon and Toupelon for Synthetic fibers.

Kanekalon: Warm base colors (red tones). It is coarser and will hold the curl the best.

Toupelon: Very fine texture. Has ash (green) tones.

Yak Hair; Yak hair is of organic origin (animal) and is most often used when human hair is desired for grey instead of synthetic for grey. It can be treated as human hair and will accept chemical perming or coloring.

We are now very pleased to be able to offer 3 types of human hair for your custom made hair system-they are:

Regular Indian or Chinese Human Hair:

This hair has gone through an acid bath stripping most of the cuticle from the hair. This hair has been chemically colored to match your hair sample.

Remy Human Hair:

Remy hair is Indian hair that does NOT go through the acid bath. It still has the cuticle on it so it is stronger. It is chemically treated to resemble imitation European Hair. It holds the curl and color better than regular human hair. Remy hair is soft and has a finer feel to blend better if your own hair is on the fine side. This is a good middle of the road quality of hair for those who want better than regular hair but cannot afford true European hair.

True Russian European Human Hair:

This hair is truly the most beautiful fine European hair available in the world.

It is NOT imitation European hair. THIS HAIR HAS NOT BEEN CHEMICALLY PROCESSED AT ALL. Russian European Human Hair has only been combed out and ran through a hackle so there is very little waste.

The hair is spectacular. This is the finest European human hair available in the world. Salons charge their clients many hundreds, if not thousands more just to have this type of hair used for hair systems (if they can get it). This is the hair that movie stars and rich people use.

It is so nice, that everybody who tries it loves it. Especially the long hair is wonderful.

NOW ITS AFFORDABLE TO ANYONE!!! See price list.

Finished Hair Length:

Finished hair length is from the knot to the end of hair before curling.

No extra charge for lengths up to 6".

Long hair charges will apply to length 8" and longer. See price list.

Undervent:

Undervent is a row of hair vented into the bottom of base along the outside perimeter. Used at the front hairline it helps to conceal the edge of base material that is not scalloped or made of lace. Light is 1 row, Medium is 2 rows and Heavy is 3 rows of underventing. We do not recommend underventing on lace units, scallop fronts, or Micro thin Poly skin (graft material) fronts. Doing this would show too heavy of a solid line on these materials and defeat the purpose of using that material.

Part Appearance:

Some type of hair direction must be given on the order. This indicates to the factory how to ventilate the hair to give it stylability. If you want a definite whorl in the crown, check the location on order form. If you want a definite or diffused part, check location on form.

Freestyle is vented forward from the crown position, and can be combed or parted anywhere.

On the picture "Draw Hair Direction" you may want to draw how the client wishes to comb their hair.

Density:

Many things such as base material, hair length and type of hair/fiber used will affect the finished appearance of Density. The Density chart shows how thick the hair will come on the unit. Example: Medium Density is 100% thickness of a normally full head of hair. Light Density is 80% thickness on a normally full head of hair, etc.

Waves & Curls:

Any amount of curl can be chosen for Synthetic hair. Human hair can only be curled at the factory. Generally curl appears to hold well. Blondes and longer lengths do not respond well to a curl. It may over process the hair and is not recommended. Due to many variables (length, density, color, organic origin) human hair reacts differently during curling procedure. We cannot guarantee a consistent exact curl. We give it our best try, without a guarantee of results. This is a professional perm rod size guide:

Red/yellow	3/16"	4-5mm	Afro
Blue	5/16"	6 mm	loose afro
Pink	3/8"	10-13mm	tight curl
Grey/white	7/16"	13-15mm	loose curl
Lavender	1/2"	18-20mm	tight wave
Peach/black	9/16"	22mm	medium wave
Orange	3/4"	25mm	light wave
Green	1"	30mm	Slight body
		40mm	Straight

Color- Hair Samples:

Color may be determined by the use of a Synthetic color ring, hair samples or a combination of both. When hair samples are sent, check sample to see if one end is lighter than the other. If grey has yellow tones, specify if we should match the yellow or use white grey. Check

color samples carefully, cut off any oxidized or discolored ends. Submit ONLY the color desired, and enough to be able to accurately see the real color.

Grey: Specify Synthetic or YAK for grey. Always specify “total” grey percentage to help eliminate misinterpretation or miscalculation of finished percentages. Our grey percentage ring can assist you in determining amount of grey to order.

If clients hair color varies significantly all over the head, then clip samples from different areas. Place each sample in a small zip lock bag and mark a letter on bag, i.e.; A, B, etc. Then write the corresponding letter on correct area on order form.

Hilites: This adds lighter tones to base color for a frosted effect. Color sample for Hilites must be sent and will be blended with base color as you specify. Percentage of highlight and areas to be highlighted must also be indicated.

Tape-Bonding Areas:

Draw on “base design” picture exactly where you want tape tab area. State width-average is 3/4 inch. Tape tab material must also be specified. Polyurethane (PU) is the most popular for sides and back. It can be specified a ‘coated’ or ‘clear’. Clear Poly skin works well as a scalloped front edge tape tab.

Ribbon may be specified on sides and back, not on the front unless this is an integration (pull through) system. Ribbon is used for cable weave track and sew method of attachment or clips. Lace fronts are the most real looking hairline. However it is very fragile and does not hold up as well as other materials do. This is why Lace materials cannot be guaranteed for any length of time. Client must be very gentle. Up to 6 months is about all the client should expect from Lace. Lace fronts can be made to be replaceable however.

If ordering lace front, it is recommended that you order 2 at a time. This way client can wear one while the repair is being done on the other. Typically this is a lot less cost for the client than having a whole new system made. Lace fronts are attached with lace frontal tape, SoftLoc or Ultrabond. These are medical grade adhesives applied directly to clients skin.

Miscellaneous:

Perimeter: All meshes must be finished around the edge. Only lace and poly materials need no finished edge. Edges maybe finished with PU, ribbon, or folded 1/8" lace (front). Be sure to specify width of tape tab area (1/4", 1/2", 3/4", 1").

Repair: Our repairs include hair addition, base repair, PU coat, and change lace front (extra cost). We do not recommend repairs to full Poly skin bases or extremely aged units. When sending in a repair, please specify on the order form ‘this is a repair’ and include all relevant information, i.e.; hair direction, type of hair, length, wave, density, color. To eliminate errors do not leave these decisions up to the factory. Due to the possibility of continued hair loss, base distortion, color changes etc., we do NOT guarantee repairs. If upon receipt of the order we determine the unit is not repairable, we will contact you immediately for advice.

Delivery: Normal delivery time for new orders is 6-8 weeks from when we receive your order. European human hair orders take at least 8 weeks for delivery. We treat every order as a “Rush” at no extra charge. Repairs take about 3-5 weeks.

Pricing: See your Cindycut Price Brochure for custom system price. There may be additional charges for extra hair length, oversize bases and other options. Payment is expected with order unless other arrangements are made.

Warranty: All Cindycut custom orders are guaranteed to be made to the clients exact specifications of the order form. If an order is incorrectly made, please advise us of this immediately. We will take prompt action to repair or remake it at no charge to you. If requesting a unit be remade at no charge, please return the original order form, original mold/template, original hair samples and incorrect hairpiece. These items must be returned to the factory. Remakes are given first priority on our rush systems. Note: Life expectancy cannot be warranted on units. With proper care the average life span is about one year (for extended wear users).

A confirmation will be mailed to you upon receipt of each order. Please check this confirmation carefully and advise us immediately if any changes are to be made. It may be necessary for us to use different terminology on your special requests for better factory communication, but we will not make any changes to your order without your approval.

A SUPPLY OF CUSTOM ORDER FORMS WILL BE SENT TO YOU AT NO CHARGE UPON REQUEST.

Important instructions for filling out the order form

- 1. Fill in Order form information.
- 2. After the form is filled out, keep the bottom copy for your records.
- 3. Send the top 3 copies, along with Template, hair samples, purchase order and payment to;

Note; If you require further assistance placing your order you may call us at 1-888-596-4247.

We also offer Visual Aid Ordering Tools. There are 6 charts in all- Density, Base Materials, Base Sample designs, grey percentage and wave and curl & color charts. \$40.00 each or \$150.00 for entire set.

Then return the charts when you are finished with them and we will credit the amount paid toward your new hair system. So they are FREE...

Enjoy your new custom hair system from Cindycut!

Making Hair-System Template

1. Place a sheet of Saran wrap, plastic wrap or similar material over the head coming down almost to the shoulders.
2. The resulting hairpiece template will be exactly duplicated in the custom hairpiece base design.

3. The Wearer holds the twisted ends while a helper covers the entire area to be marked With strips of 3m clear tape.
4. Attach the tape from front to back and side to side, four layers total.
5. Overlap the strips to create a firm shell, and just like that, a hairpiece template.

6. Start marking on the mold in front (Approx. 3-4 fingers above the brow will establish the natural hairline), Use a black marker.
7. Outline the bald area at the hairline around Start marking on the mold in front.
8. Outline the bald area at the hairline around perimeter. If attachment to the good hair is desired (for clips) then the line must be drawn into the good hair 1/2 inch. Indicate part, if any.
9. Using arrows, show hair direction (combed forward or back, ect) hair direction, particularly in front, is important to have the hairpiece conform to the clients styling desire.
10. Put (F) in front, (B) in back, (L) on left side, & (R) on right side.

11. Remove the hairpiece template from client head and trim excess material.
12. The resulting hairpiece template will be exactly duplicated in the custom hairpiece base design.
13. Remember: Left, Right, Center partings diagramed on your Templates for Hairpieces are for definite parts in your hairpiece.
14. If you wish to part on either side or use no part choose Multi-Directional.

CINDYCUT GUARANTEE

We at Cindycut International, Inc. sincerely believe that true service may only be achieved through unquestionable business ethics that are exemplified by our pledge to fairness, honesty and integrity in our dealings with our customers. We also believe if we keep the price down and offer higher quality standards than our competitors, more people can afford to have this wonderful custom hair replacement product. Many companies claim they are giving you a custom system when actually it could be a stock hairpiece off a shelf. Here is a list of ways to know if what you're getting is Truly Custom:

- If they can have it to you in 2 to 3 weeks it may NOT be custom. A custom unit generally takes 21 days to manufacture in the factory to your individual requirements. With the complications involved in shipping overseas even a rush order usually takes at least 4 weeks.
- If it comes any sooner, the unit was probably pre-made before you even ordered it. If it comes pre-cut it is not considered a custom unit. The cut in must be done on your head for the hair to look like it belongs there. Don't let anyone tell you different. Sure some companies send their units cut and ready to wear, but chances are it won't look right on your head or blend with your natural hair. A custom unit would not be a one cut fits all.
- If they offer you 100% money back guarantee it may not be a custom unit. After refunding the client their money the company wouldn't be able to reuse a custom piece on someone else. So they would be out the money and be in possession of a unit that is of no use to them or anyone else.
- A custom unit should be guaranteed to be made to your exact specifications or be replaced free.

We guarantee the quality of our Custom Systems to meet or exceed the quality of our competitors. We guarantee our price to be the most reasonable for the product you are purchasing. Our Custom Systems are guaranteed to be made to the exact specifications of the order form or they will be exchanged without cost penalty. Products which are cut, worn, or used in any way may not be accepted.

There is a 25% restocking fee on any other returned products.

All products returned after 15 days are subject to refusal.

Hair Loss Solutions

CINDYCUT

For Men. For Women. For a full head of hair.

Cindycut Wearer

We are very pleased to be able to offer 3 types of human hair for your custom-made hair systems which includes the following:

Regular Indian Chinese Human Hair

Retail Price per Unit \$598.00

This hair has gone through an acid bath stripping most of the cuticle from the hair. This hair has been chemically colored to match your hair sample.

Remy Human Hair

Retail Price per Unit \$748.00

Remy hair is of Indian origin collected from various temples in India, where people go and offer their hair to Lord Tirumala in reverence. The specialty of this hair is that when the hair is cut from the devotee's head, they are cut in a ponytail or braided form thus keeping all the cuticles in the same direction. The Remy hair when used properly in hair ventilation of hair pieces or on a weft do not tangle and have a smooth feeling when you run your finger from top to bottom. This is hair that does not go through an acid bath. Because it still has the cuticle, it is stronger than regular hair used in hair pieces. This is a good middle of the road quality of hair for those who want better than our regular hair but don't want to pay for European hair.

European Human Hair

Retail Price per Unit \$1298.00

This hair is truly the most beautiful fine European hair available in the world. It is NOT imitation. THIS CAUCASION HAIR HAS NOT BEEN CHEMICALLY PROCESSED IN MOST CASES. It has only been combed out and ran through a hackle so there is very little waste. This hair is most desirable. Salons charge their clients many hundreds, if not thousands more just to have this type of hair used for hair systems (if they can get it). This is the hair that movie stars and people of wealth use. It is so nice that everybody who tries it loves it, especially the long hair being wonderful. **Now it is affordable to everyone!**

Now it's affordable to everyone!

Longer lengths, larger sizes, higher density and shipping charges are in addition for all types of hair

TDI FAST TRAK TAB SEALER

Fast Trak Hair Knot & Tape – Tab Sealer by TDI

A Professional Product – For Salon Use Only!

Seals the knots to minimize hair loss.

Strengthens all lace and netting of the hairpiece base.

Seals the tape tab giving the tape better adherence.

Completely preserves a urethane or Vinyl base.

Prevents oils from penetrating the tape by sealing the base.

Prevents cracking and early deterioration of a Urethane or Vinyl base.

Dramatically improves adhesive performance.

Possible to alter hair direction if desired.

4oz. Spray Bottle - \$19.95

- To seal the knots and tape tab on the base of a hairpiece:
- Cleanse the hairpiece with shampoo as usual (do not apply any conditioner).
- Dry the hairpiece thoroughly.
- Spray HK&T Sealer 3 to 5 times on the entire inside base of the hairpiece holding the bottle 6" away.
- Dry with hairdryer set on "warm" temperature (do not use hot setting).
- Repeat #3 and #4 above for new hairpieces.
- For best results repeat procedure once per each service visit.

To seal the hair in a human hairpiece:

Spray Fast Trak HK&T Sealer 3 to 5 times directly on hair holding the bottle 6" away.

Brush through hair.

Dry with hair dryer set on "warm" temperature (do not use hot setting).

For best results apply and follow above instructions a section at a time.

Use Pretti-Slick Long Life for finishing.

WARNING: Flammable. Use caution when using this product. Avoid breathing in fumes! Chemicals contained in this product can cause skin & eye irritation. If sealer comes in contact with eyes or skin, flush immediately with water 15 minutes.

CHRONIC HAIR PULLING (TRICHOTILLOMANIA) IS TREATED USING BEHAVIOR THERAPY. CINDYCUT INTERNATIONAL ASSISTS THOSE WHO DESIRE COGNITIVE BEHAVIOR THERAPY INCLUDING HABIT REVERSAL TRAINING. USING OUR CUSTOM MADE HAIR SYSTEMS, COVER AND PROTECT ONLY THE AREA BEING AFFECTED BY THE DISORDER UNTIL THE COMPULSION IS GONE. IF CAUGHT EARLY ENOUGH YOU CAN PREVENT PERMANENT HAIR LOSS.

Trichotillomania

‘An irresistible urge to pull out your own hair’

In our Hectic, stressful everyday lifestyles we all use the term “I was literally pulling my hair out!” but this is living reality for people with impulse control disorder called trichotillomania . It can be very upsetting or deal having to deal with issues such as hair loss and bullying as a result.

The inflicted person may feel helpless and loose all self-confidence. People with Trichotillomania can pull from anywhere such as the scalp or eyelashes, to leg and arm hairs. It is a frustrating experience for sufferers, as loved ones try to help but simply do not understand. They may see this as a phase in which it should get over in time, but the disorder can get worse instead of better. The nagging feeling in the stomach will just get worse and worse until you feel the relief and gratification of pulling the hair. Cindycut has the answer!

CINDYCUT INTERNATIONAL MY HAIR WEAVER

From one stylist to another, without clients there is no money, and with no money we have no life. How would you like to double your income or more by adding hair replacement to your services? Let me set the scene. A lady comes to your salon with a mental disorder where she pulls out her hair by the root. She is sitting in your chair bawling hoping that you can help her. Would you be able to? Another lady comes to you because she had been shaving her head for years to have a hair piece put on.

How many of your clients would rather use an integrated system rather than having your head shaved? It's time to think things through. How would you feel if you had to turn these women or others away because you couldn't provide them with the service? How would you like to be sent away if you had their problem? As a stylist I believe that My Hair Weaver is a wise attachment option method to offer your hair replacement clients. I have used cornrows to do extensions, and thought you could use them to do hair replacement until I was faced with clients with the same scenarios above.

How could you make an odd shaped track on someone's head with a cornrow braid? With My Hair Weaver you can. How could you keep a cornrow small? You can't drop hair as you go to keep the track small and next to the head. With My Hair Weaver you can. Be as creative as you can and it stays put, less noticeable and more comfortable for your client.

At first I thought that the price of it sounds too high but My Hair Weaver is worth it, when you can make it back with a couple of clients. It will also increase your income with loyal and grateful clients. I really thank Cindycut for teaching me with their videos and special on-call help. Even if you are not near Cindycut International they are just a phone call away and always willing to help.

Sincerely, Melisa

Custom Hair Replacement Systems

Correct Client Usage Guide

- It is recommended that you reseal your knots each time you wash your hair piece. This will help to prevent the hair shedding. Use TDI Hair knot and tape tab sealer.
- Clean your hair piece with a professional grade, mild pH shampoo (4.5-5.5)
- When washing it, you must gradually wet the hair down and brush it gently before you completely wash the hair. If the hair is very dry and a lot of water is added at once, it will swell up like a sponge and tangle!
- Use cream type conditioners that do NOT contain Lanolin, Polymers, or heavy oils. These ingredients cause matting in chemically processed human hair.
- Be sure to keep ALL cream type conditioners OFF the base material of the unit because it can cause the base knots to soften, then hair will fall out.
- Use leave on spray moisturizer type conditioners to artificially replace the skins sebum production that naturally lubricates the hair shaft. This is necessary to keep the hair soft and pliable. We suggest using TDI-Pretty Slick Long Life.
- Not conditioning at all will cause dryness and tangling, however, using the wrong type of conditioner can be just as harmful. Use caution with high Protein content conditioners as they do not provide needed moisture. Small amounts of Protein can be excellent at giving the hair needed strength but over using Protein products will cause dryness, tangling, matting and ultimately breakage.
- Deep conditioning is recommended periodically with water based, not oil-based ingredients.
- Avoid SD-40 alcohol-based styling aids as they can dry out the hair. We suggest corn alcohol-based hair sprays whenever possible.
- Lace front units, full Lace systems or Micro Thin Poly skin units must be treated very gently as they are fragile materials and hair can fall out easily. These materials cannot be revented (more hair added) and are considered throw away units. For this reason, these materials cannot be warranted by the factory.
 - **Enjoy your hair system by Cindycut International, Inc.**
