

ALPINE 2020 IH USER MANUAL

We are thrilled you decided to purchase the ToggenGear Alpine 2020 Induction Heater. An easy to use, single button heater for your DynaVap. Thank you for your support!

QUICK START GUIDE

Press the on/off button to turn on the device. You will see the battery lights illuminate, indicating battery level.

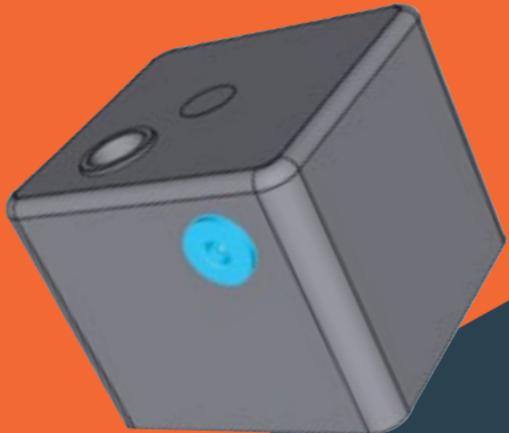

Place your DynaVap into the heater on the top of the unit and press down to activate. You will see a red ring of light emit around the heater. This indicates the heater is on. Continue to hold your DynaVap down in the heater to keep it heating. Once you hear the “click”, your DynaVap is ready for use. Note: If you do not hold the DynaVap down in the heater, the device will not heat up.

Use the magnet on the top of the device to help cool your Dynavap or store it when not in use.

To turn the device off, press the on/off button. The battery lights will go off, indicating the device is no longer on.

CHARGING YOUR ALPINE 2020 IH

Each light on the device represents 25% battery life. When all four lights are illuminated the Alpine is completely charged.

To charge the device, use the included charging cable. Plug it into the back of the device and into a working outlet.

Once plugged in, you will see the blue light illuminate on the charging box. It takes about 2 hours for the device to reach a full charge.

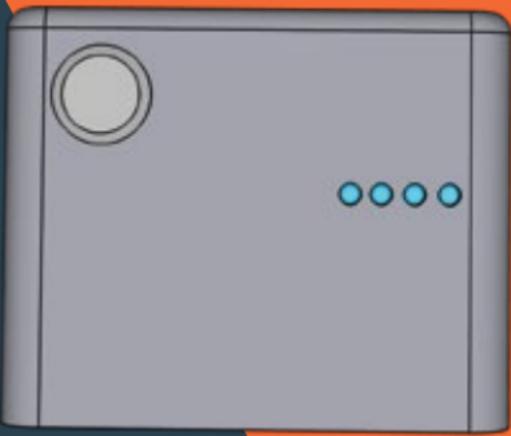

CHARGING YOUR ALPINE 2020 IH

If the Alpine is off, you will not see any lights on the device illuminate when the unit is charging.

If the Alpine is on, the battery lights will be illuminated and each light will light up as the unit charges, until it is completely full.

The Alpine has pass through charging so you can use the device while it charges. Note: This will prolong the charging time of the device.

BATTERY LIFE INDICATORS

The 4 LED lights on your Alpine 2020 IH indicate the power level.

4x lights = 100%

3x lights = 75%

2x lights = 50%

1x Red light = 25% or less

We recommend you charge your Alpine for 2 hours max. Although you can not overcharge an Alpine.

ALPINE 2020 IH CLEANING GUIDE

To clean your Alpine safely we recommend something light for the wood and shell. Windex or other similar light multipurpose cleaners work really well. For the Maple top extra care can be taken by using wood specific cleaners.

TIPS & TRICKS

Although “respect the click” is the golden rule sometimes applying an additional 2 second hold will pump that first rip to the next level!

Wait until you hear the click from cooling before going back in for the second hit.

Not sure how many runs you can get per bowl? We prefer to go 3 to 4 deep then give the load a check for color. still green or just light brown, good to go for another sesh or 2!
